SOFIA TAN

Process Automation Analyst

Malaysia | sofia.tan@example.test

PROFESSIONAL SUMMARY

Process automation analyst with four years of synthetic experience documenting administrative workflows and building supervised automation prototypes. Combines process mapping, Python and SQL with practical exception handling and human approval steps. Comfortable working with operational teams to define a useful scope, test repeatable scenarios and document failure recovery. Seeking an analyst role focused on reliable workflow improvement.

CORE SKILLS

Process mapping; robotic process automation (RPA); Python; SQL; AI literacy; responsible AI; workflow validation; exception handling.

PROFESSIONAL EXPERIENCE

Process Automation Analyst **2022 – Present**

Rimba Demo Workflow Studio | Fictional employer, Malaysia

- Mapped invoice intake and approval workflows with operational colleagues, identifying decision points, required fields and manual exceptions; documented the current process before proposing changes and obtained reviewer feedback on the revised steps.
- Built robotic process automation prototypes for repetitive form preparation using fabricated records; included field validation, a visible exception queue and a required human approval step before any final action in the demonstration workflow.
- Used Python and SQL to compare source records with prepared output, checking for missing identifiers, duplicate submissions and unexpected changes; produced a reconciliation report and repeatable test cases covering both normal and failure paths.
- Prepared handover guides describing prerequisites, access boundaries and recovery procedures; delivered an AI literacy session explaining responsible AI, uncertainty and why generated suggestions require a person to review the supporting evidence.

Operations Support Associate **2020 – 2022**

Kenanga Practice Operations | Fictional employer, Malaysia

- Maintained working registers, checked supporting documents and prepared clear handover notes for colleagues. Followed documented procedures, asked for clarification when evidence was incomplete and escalated unresolved requests to the appropriate supervisor.
- Supported team reporting by organising source files, checking basic totals and recording changes in a shared issue log. Helped new colleagues understand the checklist and documented recurring questions for the next process review.

SELECTED PROJECT

Created a supervised RPA demonstration for processing fictional service requests. Combined a process map, input validation script and review queue, then tested duplicate requests and incomplete records. Recorded the observed limitations and prepared a rollback checklist so a reviewer could inspect and reverse the prototype actions.

EDUCATION

Bachelor of Information Systems 2017 – 2020

Demonstration Institute of Information Systems | Fictional institution, Malaysia

ADDITIONAL INFORMATION

Languages: English and Bahasa Melayu. Available for practical skills assessments. All qualifications and achievements are fabricated for product testing.

SYNTHETIC DEMO CV – Fictional person and history; not for recruitment.
