ADRIAN LIM

Data Analyst

Malaysia | adrian.lim@example.test

PROFESSIONAL SUMMARY

Data analyst with three years of synthetic experience preparing operational reports and investigating business questions with SQL, Python and spreadsheets. Turns ambiguous reporting requests into documented metrics, reproducible queries and clear visual summaries. Values source traceability, simple validation checks and communication with nontechnical colleagues. Interested in a role supporting practical decisions through accurate, understandable analysis.

CORE SKILLS

SQL; Python; Excel; spreadsheet analysis; data visualisation; data validation; reporting; stakeholder communication.

PROFESSIONAL EXPERIENCE

Data Analyst **2022 – Present**

Awan Demo Insights | Fictional employer, Malaysia

- Wrote SQL queries joining orders, products and calendar tables to prepare a weekly operations report; checked row counts and totals against source extracts and documented assumptions about cancellations, returns and reporting cut-off dates.
- Used Python to clean inconsistent category labels, detect missing values and compare repeated extracts; separated transformation steps into reusable functions and recorded input versions so colleagues could reproduce the analysis.
- Created data visualisation dashboards showing demand, fulfilment delays and exception counts; chose readable chart types, labelled units and explained the difference between observed results and working hypotheses during review meetings.
- Maintained Excel reporting workbooks with pivot tables and lookup formulas, reviewed incoming requests with operational colleagues and translated feedback into a concise metric dictionary and a prioritised reporting backlog.

Operations Support Associate **2020 – 2022**

Purnama Practice Retail | Fictional employer, Malaysia

- Maintained working registers, checked supporting documents and prepared clear handover notes for colleagues. Followed documented procedures, asked for clarification when evidence was incomplete and escalated unresolved requests to the appropriate supervisor.
- Supported team reporting by organising source files, checking basic totals and recording changes in a shared issue log. Helped new colleagues understand the checklist and documented recurring questions for the next process review.

SELECTED PROJECT

Analysed a fabricated retail dataset with SQL and Python, then produced a data visualisation briefing for a mock store manager. Included a quality report covering missing identifiers, duplicate rows and date coverage. Shared a README with reproduction steps and explained the limitations of interpreting a small demonstration dataset.

EDUCATION

Bachelor of Science in Applied Analytics 2017 – 2020

Demonstration Institute of Analytics | Fictional institution, Malaysia

ADDITIONAL INFORMATION

Languages: English and Bahasa Melayu. Available for practical skills assessments. All qualifications and achievements are fabricated for product testing.

SYNTHETIC DEMO CV – Fictional person and history; not for recruitment.
